## WireCrafters at FABTECH 2012 in Las Vegas

### **WireCrafters Takes Machine Guarding to Vegas**

FABTECH, North America's largest metal forming, fabricating, welding, and finishing event, heads to the Las Vegas Convention Center November 12-15, 2012.

If your job requires you to look for new ways to work smarter, operate leaner, and boost productivity, then you and your team need to attend FABTECH. Make plans now to attend your industry's main event and you'll find WireCrafters products, resources, and ideas to strengthen your business and achieve your manufacturing goals.

### Come See WireCrafters RapidWire™ at Booth N 1824

WireCrafters will be displaying our machine guarding that is used around packaging areas, robotic work cells, and other active machines in Booth N 1824. The RapidWire™ welded wire machine guard system utilizes a modular design which allows for combinations of standard parts to meet your specific requirements. The machine guarding system's three basic components – framed panels, posts, and a wide variety of door styles – provide the flexibility to design and install any type of machine guarding required to make your robotic cell safe to use. WireCrafters can tailor-make a machine guarding system that meets your rigorous safety standards.

Also, before you leave for Vegas, be sure to download our new WireCrafters iPhone app for access to

all of our product resources and documents, quick and easy quote forms, and special features specifically aimed at our Dealers!

# WireCrafters Machine Guarding – The Smart Choice

WireCrafters machine guarding comes in two different styles. The traditional

### WireCrafters at FABTECH 2012 in Las Vegas | On the Wire | WireCrafters

physical barrier woven wire style machine guarding and the RapidWire™ welded wire machine guarding. Both machine guarding systems utilize black powder coated panels and yellow powder coated posts.

WireCrafters carries standard panels, posts, and doors in stock for immediate shipping and can custom build machine guarding configurations to meet your exact specifications. We can equip your door with a custom lock, such as a Fortress Interlock, or prep the door for using the third-party lock of your choice.

#### Safety, Security, and Separation

WireCrafters machine guards are a simple, effective way to protect personnel from the dangers posed by automated equipment. These physical barriers are a strong, reliable, and economical solution to plant safety needs, and double as a safety net by containing objects ejected by a malfunctioning robot.

The machine guarding system's versatility allows easy integration of access doors or material-handling openings with system controls. Unlike hi-tech, powered safety devices, our machine guarding is always on duty – unaffected by power outages or electrical problems.
