

WireCrafters®

Secure Parts Storage Under Mezzanine

A local distributor, [RMH Systems](#), was given the task of creating a secure area for parts and inventory storage, however this wasn't a typical installation. The project was a little more challenging, requiring that the secure storage area be placed inside, around, and under a mezzanine.

Stock-sized wire mesh partition panels, along with sheet metal adjustable panels, were engineered to work together in order to fit complex, custom dimensions using standard parts.

WireCrafters recommended our standard 8'-5 1/4" high partitions that would, by default, fit under the mezzanine's main structure. The layout of the area required the partitions go along side the stairway to create a secured storage area while utilizing the maximum amount of space. Hinged doors 3' x 7' were installed and equipped with built-in key locks, controlling access to the area and providing a secure storage area to the high-value parts and inventory being stored under the mezzanine.

WireCrafters®

When asked why RMH Systems chose WireCrafters over other wire partition manufacturers, their response was that it was an easy choice – when you choose quality and durability over all else, WireCrafters is the way to go. This project required a complex design and engineered know-how to ensure an easy installation, and WireCrafters helped along the way.
